

the relevant fisheries management convention, which is likely to come into force during the duration of the extended operation of the Treaty.

Existing legislation, including the Magnuson-Stevens Fishery Conservation and Management Act, 16 U.S.C. 1801 *et seq.* and the South Pacific Tuna Act of 1988, Public Law 100–330, provides sufficient legal authority to implement U.S. obligations under the Treaty. Therefore, no new legislation is necessary in order for the United States to ratify these Amendments. However, minor amendments to section 6 of the South Pacific Tuna Act of 1988, Public Law 100–330 will be necessary to take account of the Amendment to paragraph 2 of Article 3 “Access to the Treaty Area,” which opens the high seas of the Treaty Area to fishing by U.S. longline vessels.

I recommend that the Senate give favorable consideration to these Amendments and give its advice and consent to their ratification at an early date.

George W. Bush

The White House,
February 11, 2003.

Remarks to Small Investors in Alexandria, Virginia

February 12, 2003

Thank you all for coming. Thanks for your interest in this country and its future. We’ve got some big challenges ahead of us. We’ve got an opportunity to make the world a more peaceful place and a freer place. And I believe, as a result of the resolve of the United States of America, the world will be more peaceful, and the world will be more free. And here at home, we’ve got a challenge with our economy. I mean, frankly, it’s not strong enough. It is not robust enough. Anytime somebody is looking for a job and can’t find one means we’ve got to work together to create jobs.

Now, the role of Government is not to create wealth. The role of Government is to create an environment in which the entrepreneurial spirit can flourish, in which people are encouraged to invest and save, in which there’s confidence in the future of the coun-

try. And that’s what we’re here to discuss today.

I want to thank John Snow for agreeing to serve in our administration. He came at a pretty tough time. [*Laughter*] Some people would have said, “Well, I don’t think I want to take on the job unless everything is precooked and the markets will be surging.” But he realized that this country needed all of us pulling together. So I asked him; I said, “Would you be willing to leave the private sector to serve America?” And he said yes. And I’m thankful for that. I’m glad to have him on my team. His job is to talk about our program all around the country and particularly in the Halls of Congress and convince them about the wisdom of what we’re proposing.

Speaking about Halls of Congress, John mentioned George Allen, the Senator from Virginia. I’m glad that George is here. And Don Manzullo from Illinois is here, too. I’m honored both you guys came. I appreciate your interest. I look forward to working with you and your colleagues, both Republicans and Democrats, to do what’s right for the American people.

I want to thank Chuck Schwab, as well, for coming. He’s a—he is a leading entrepreneur in the country. Built his own business. Tomorrow, when I go down to Florida, I’m going to talk about the dreams for small businesses that grow to be big businesses. This is a guy that took a small business and grew it into a big business. It’s really what America is all about, is to have unlimited horizons for people to take risk so they can achieve dreams, no matter what their status in life may be. And the Schwab Company certainly is—represents the great entrepreneurial spirit of our country.

I also want to thank Susan Meisinger and David Hutchins, who run the Society for Human Resource Management. Thank you for opening up your hall. It’s awfully thoughtful of you to let us come in here. I fully recognize it’s not easy to host a Presidential entourage—[*laughter*]—but you did it. And thanks for giving us a chance to come and talk about how we’re going to address some of the big challenges here at home.

My attitude about the economy is that, first, we’ve done a pretty remarkable job here

in America of overcoming some difficulties. The first three quarters of the year 2000 were recessionary. They were negative growth. Fortunately, we passed tax relief, which—based upon the principle, if people have more of their own money, they're likely to spend it, and when they spend it, somebody's likely to provide a good or a service, and when somebody provides a good or a service, somebody's more likely to find work. And I think most economists would tell you that the recession—most objective economists—would tell you that the recession was shallower as a result of the initial tax relief package that both Republicans and Democrats voted for.

Then the terrorists hit us. And people of Virginia know full well the impact of the terrorist attack on the Pentagon and this part of the world. Of course, the people in the great city of New York understood the effect that it had, the terrorist attack had on the New York economy. But it affected our whole economy. The airline industry became—had difficult times. We couldn't get projects started—real estate, big building projects going—because of the lack of terrorism insurance. We actually dealt with that issue in the Halls of Congress, and hopefully big construction projects which will put our hardhats back to work will get going.

The country was resilient, though, and strong, determined to defeat terror and determined to go about our life, no matter what the threat may be. And we began to recover. And then it—then we found out some of our fellow citizens, a few of the many executives which run our companies thought they could lie and cheat. And that created a lot of small investors—and large investors, for that matter—began to wonder whether or not the numbers they were reading were accurate. There was a loss of confidence in the markets because of the corporate scandals.

And we dealt with that, and we're dealing with that. Pretty soon, a good man named Bill Donaldson will become the Chairman of the SEC. He knows what his charge is. His charge is to make sure that when an investor, a member of an investor club opens up his or her portfolio or the balance sheet of a company they've invested in, they know

they're reading true numbers, so we can regain confidence.

Our economy is growing, in spite of all of what I've just described, but it's not growing strong enough. And so I went back to the Congress and proposed a plan that is an aggressive plan, no question about it. But the principle of the plan says, we trust people in this administration. We trust the people to make wise investments. We trust the people with their own money. We trust the moms and dads to be able to save for their children. It's really the crux of the economic plan. It says it's the people of America; it's the ingenuity and hard work and wise investment capabilities of the American people that make this economy strong and different. And therefore, the plan is a plan that puts trust in people. It's a well-thought-out plan. As a matter of fact, over 200 economists today enthusiastically embraced it, said it's a good idea.

The first part of the plan has to do with your income-tax levels. It says everybody who pays taxes ought to get relief. The role of the Government is not to try to pick and choose who the good taxpayers are and who the bad taxpayers are. If you pay taxes, you ought to get relief.

Of course, that was already passed in the year 2001. We also are phasing—we're increasing the child credit to \$1,000 over a period of time, reducing the marriage penalty over a period of time, reducing the bottom rate from 15 percent to 10 percent.

So what we've said to the Congress is, "You've already passed all this. You've already accepted the major principle involved in tax relief, which is, trust American people with their money. You've already seen the effects of what a tax relief plan can do. Just accelerate what you've already got on the books. Take that which you have passed, and instead of phasing it in over 3 or 5 years, let's move it this year. If the economy needs a little extra oomph, if more money needs to go into the pockets of our people, so as to encourage economic vitality, why wait? You've been through the debate. You've already talked about the principles involved. Move it up."

This will affect 92 million Americans who will receive, on average, a tax relief of \$1,083.

Now, some in Washington may say, "Well, that's paltry. That's not enough." Uh-uh, \$1,083 is a lot of money for people, particularly when you think about the effect it will have on our economy when millions of Americans take that and invest it or buy things with it. It will have an effect that will increase the economic vitality of America.

You hear a lot of talk about stimulative—what's stimulative, what's not stimulative. We anticipate that this plan—this aspect of the plan is over \$50 billion in the economy this year. You see, I plan to not only get them to accelerate the tax relief; I'm going to ask Congress to make it retroactive to January 1st, so it will have an immediate effect on the economy. That's what's needed. The timing of tax relief is important, just as important as tax relief is.

And so I'm optimistic that Congress was wise once, and they'll be wise again on the same plan. This also will have an effect on small businesses. Tomorrow I'm going to Florida to talk to small-business owners and entrepreneurs, and what Americans and Congress must understand—I know George Allen understands this; Don understands this—is that most small businesses pay tax at the individual tax rate.

When you hear somebody say, "I'm a sole proprietorship," that means you're paying individual income taxes. If you're a Subchapter S or a limited partnership, that means you're paying individual income taxes. And so when you reduce income taxes, you're really putting capital in the hands of small-business owners, and capital, extra money, gives that person a more likely—a chance to expand. And expansion means jobs. And by far, the vast majority of new jobs in America are created by small-business owners. And so this tax plan not only helps our fellow Americans save, it also helps small-business owners with additional capital. It's like a huge capital infusion into the small-business sector of America.

On top of that, I'm asking Congress to allow small firms to write up—up to \$75,000 worth of equipment in the year in which they spend it, as opposed to limiting the deductions to \$25,000. And that means a lot for small businesses. When a person can deduct an additional \$50,000 of capital investment,

it means you may have the small-business person invest in one extra machine. But when that's multiplied all across the country, all throughout America, it means the machine manufacturer is more likely to be able to provide jobs. It means the business that buys the machine becomes more efficient. It means somebody is probably needed to operate the machine so that there's extra employment there. It will have a ripple effect throughout our economy, which is very important for our fellow Americans to understand.

The other thing I want to talk to you about is the dividend proposal. In America today we tax corporate-income profits, which is fine. We should. It makes sense. But then we take that profit and distribute it to a shareholder in the form of a dividend, one of the owners of the company. And then he gets taxed again, and that doesn't make sense. You don't want to keep taxing capital. If capital equals jobs, you really don't want to tax it but one time, seems like to me. It makes sense.

So when people in America hear us talk about the elimination of the double taxation of dividends, they've got to understand we're doing so with two things in mind: How do we improve the lot of our fellow Americans; and what do we do to increase jobs? If somebody is looking for work out there, and capital equal jobs, therefore, the more capital available for investment, the more likely it is he's going to find work or she's going to find work. And that's what we're here to talk about today.

The idea of allowing people to keep more of their own money is particularly important for many of our retired citizens. You've got a person who's worked all their life, and they've got medical bills, maybe, piling up, particularly since Medicare isn't all that effective these days for some. Or you're worried about your grandkids' education. But really what you're worried about is you want to make sure that you have got a comfortable existence.

Ten million senior Americans receive some sort of dividend income. It certainly makes sense to me that if part of good policy is to encourage job creation with more capital, it's a nice dividend, so to speak, to allow

our seniors to have more money as well. So this relief plan will immediately give seniors \$800 on average a year more money, which is vital for their retirement. It's a plan which affects people's lives in a positive way.

Secondly, this is a nation of investors. It used to be when you talk about stocks and bonds—it probably wasn't all that long ago—you'd say, "Well, gosh, how's your portfolio?" And that would probably pertain to a handful of people that lived—knew something about Wall Street. There probably weren't a lot of them in Crawford, Texas, all that long ago, saying, "Hey, my portfolio's good. How's yours?" But now, America's becoming a nation of owners and investors. We're a much more sophisticated country when it comes to stocks and bonds. Eighty-four million Americans own a stock directly and/or through a pension plan. And so, therefore, policy, public policy which affects stock ownership, public policy which affects those who own equities and those—public policy which encourages ownership, makes sense.

I mean, after all, we want 100 percent of our people to be a part of the ownership society. The more somebody owns, the more somebody is going to have a stake in the future of the country. We want everybody to have their own home. We want everybody to have their own balance sheet, their own savings, their own plans. And excluding the double taxation of dividends rewards small investors; it encourages stock ownership.

It also will have a positive effect when it comes to our corporate America. And a lot of corporate America said, "Invest in me. The sky's the limit, a fantastic growth potential." They say, you know, "We may not be making any money, but, hey, give me a shot." And that works in some cases. But it also makes sense to have people say, "Invest in me because you're going to get a steady source of the cashflow of my company. I'm going to share it with you. We're proud that you took risk in us, and in return we're going to give you a steady flow of the cash coming into the company through the form of a dividend."

Eliminating the double taxation of dividends will encourage more of corporate America to distribute profits and cashflow to their investors through dividends. And that's

good; that's a good corporate reform. It's also good for encouraging the ownership society, and it's good for enhancing the lifestyle of millions of Americans all across the country.

The getting rid of the double taxation of dividends is good economic policy for the short term for America; it is good economic policy for the long term of America. And I urge the Congress to eliminate the double taxation of dividends.

One of the things we did before coming over here is we had a roundtable discussion, sitting around a square table. [Laughter] I like—I appreciate Chuck providing the square table—[laughter]—but I'm more appreciative of the members of the roundtable who came to talk.

Now, we talked to Joan Hanover. She and her husband, George, were visiting with us. They are near retirement—retiring—in the process of retiring, meaning they're very smart, active, capable people who are retirement age and are retiring. They receive \$1,700 additional dollars a year when we get rid of the double taxation of dividends. That is a significant amount of money for the Hanovers. It's additional money that they can choose to do with what they—they can do with their own money.

Part of the dialog, by the way—the money we're talking about today is not the Government's money. See, that's the other important thing to remember. It's an important principle when it comes to tax relief. It's your money we're talking about. And the Hanovers are having more money to invest.

Joe Kemper will have an additional \$1,600, he shared with us. The whole tax relief will actually give him \$3,500 additional money in his own pocket, of which 1,600 will be from getting rid of the double taxation of dividends. I hope you didn't mind me saying that, Joe. But the point is, is that—I think Joe will tell you, he's not one of these superrich in America. He's a guy who served his country. He worked hard all his life—\$3,500 means something to him.

When you hear the debate about this kind of class warfare, rhetoric about, "Oh, this is for the rich, only for the rich," I want you to think about the Joe Kempers of the world. I certainly will. A fellow who worked for our Government and now a fellow who we trust

with that \$3,500, because it's his money. And when he invests it, it's going to have a positive effect. All the Joe Kempers of the world taking that extra money and investing it will mean somebody else is likely to find a job, and that's important for our fellow Americans to understand.

We met with Tim Roberts and the Lanes, Brian and Wendy Lane. They were—they are younger parents. The tax relief plan will mean they will have more money to invest for their children. When they set aside the—some of the money that they get in a child's education trust, for example, and that compounds over time, it means it's more likely that that child is going to have a pretty good nest egg. The more money they have, the more likely it is they'll be able to save for their children's future.

If we get rid of the double taxation of dividends, it means that one of the good investment vehicles for a child who is young today will be a dividend-paying stock, because not only will the person be able to get the yield, the person will get the appreciation of the company in which they invest.

These good couples work hard for their children. They make sacrifices for their children. And it makes sense for our tax policy to reward them for their sacrifices.

The plan we've laid out is good for job creation. The plan we've laid out also speaks to the aspirations of many of our citizens. And that's very important for Congress to understand when they debate this plan. It speaks for the aspirations of the senior citizen to have a comfortable lifestyle when they retire. It speaks to the aspirations of the moms and dads to be able to invest for their children. It speaks to the aspirations of a person looking for work today. It really speaks to the hopes of our country that we want our economy to be as strong as it possibly can be, as we take on some of the great challenges which this country has ever faced.

This country will accomplish anything we set our mind to. We will achieve peace in the world. We will work for freedom, not only here in America, a free and just society. We believe in freedom around the world be-

cause everybody has got worth. See, one of the great principles of America is everybody has dignity. Everybody counts. Everybody matters. As I said in my State of the Union, liberty is not America's gift to the world. It is God's gift to human—mankind, and that's what I believe.

And as we think about how to have a better society and a more peaceful world, we've got to trust in the wisdom and strength of the American people. After all, the American people is this country's greatest asset.

I boldly predict that with good policy this economy will be strong. I boldly predict that with wise diplomatic policy the world will be more peaceful. And I can predict that, because we happen to live in the greatest nation on the face of the Earth. Thank you all for coming. And may God bless America.

NOTE: The President spoke at 2:13 p.m. in the Founders Room at the Society for Human Resource Management. In his remarks, he referred to Charles Schwab, chairman, Charles Schwab Corp.; Susan Meisinger, president and chief executive officer, and David B. Hutchins, chair, Society for Human Resource Management. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

Statement on Initiatives To Reduce Greenhouse Gas Emissions

February 12, 2003

The United States is taking prudent steps to address the long-term challenge of global climate change. We are reducing projected greenhouse gas emissions in the near term, while devoting greater resources to improving climate change science and developing advanced energy technologies. America has already made great progress in this effort: Between 1990 and 2001, industrial sector emissions were held constant, while our economy grew by almost 40 percent. Sustaining and accelerating this progress will help us meet our goal of reducing the greenhouse gas intensity of the American economy by 18 percent by 2012.
